

Cleaning Tomorrow's Air Today

VISCON

Technical Data Sheet #1117

**Tests of Emissions Reduction
Using Viscon in an Off-Road Engine**

Olson Ecologic testing laboratories of Fullerton, California conducted a series of emissions related tests in an off-road Caterpillar engine with and without Viscon treatment of the fuel. The test program was carried out using a California Air Resources Board test protocol which includes EPA's Steady State Test cycle. The data below was obtained following a 1,000 hour durability protocol.

Grams per Horsepower per Hour

	HC	CO	NOx	PM
Diesel	1.29	2.56	7.09	.308
Diesel + Viscon	.94	1.59	5.29	.159
% Difference	-26.8%	-37.9%	-25.4%	-48.4%
